

# LEWIS'S BUILDING LIVERPOOL

J & J Carter have designed and manufactured a 35m interior tensile sail with striking red graphics. Located in the soaring atrium of the Lewis's Building, a 20th-century Grade II listed building located in Liverpool, England.

We produced a five-storey high tensile sail and worked with Skyline Property Solutions Ltd. an interior fit-out company

Purpose-built as the flagship store for the now-defunct Lewis's department store chain, the building has been redeveloped as part of the £160m Central Village regeneration scheme. Today, Lewis's Building is being transformed into a mixed-use development, including shops, office spaces, a gym and more.
